ABSTRACT OF THE DISCLOSURE

Dietary supplements include a complementary blend of fruits including at least

noni and Luo Han Guo. Other fruits having a high ORAC value, such as blueberries

and raspberries, are also preferably incorporated. The combination of the Luo Han Guo

and noni masks the noni's flavors and odors while sweetening the dietary supplements.

The Luo Han Guo can be simultaneously provided in both powder and liquid form so

that the liquid form acts as the primary sweetener while the powder form acts as the

primary masker. The dietary supplements also have an enhanced natural preservative

effect, providing an extended shelf life without the use of artificial preservatives.
